SOY FOR CHILDHOOD GROWTH

SOY CAN SUPPORT YOUR FAMILY'S HEALTH AND LIFESTYLE

An excellent source of plant based/vegan nutrition

- Soy protein contains all essential amino acids, making it a higher quality protein when compared to other plant-based protein (1)
- Provides a good source of Potassium, Magnesium, Iron, Zinc and B-Vitamins $^{\scriptscriptstyle{(2)}}$
- Is rich in isoflavones* (found in certain beans, fruits and nuts), which have been shown to reduce inflammation in the body $^{\rm (2,3)}$
- *Isoflavones occur naturally in plants. They are categorized as plant estrogens because their chemical structure is similar to the hormone estrogen found in both males and females. Their function, however, is very different. Clinical studies have shown no hormonal effect from isoflavone consumption.⁽⁴⁻⁷⁾

A healthy option for those with dairy allergies and intolerances

- Soy products do not contain lactose, a sugar found in dairy that can be difficult to digest and absorb, which may cause an upset stomach
- Soy allergy in children is far less common than allergies to dairy ⁽⁸⁾

THE BENEFITS OF SOY FOR CHILDHOOD GROWTH AND NUTRITION

Supports

growth and

Soy has been

development

studied for over

40 years in children

and provides high

quality nutrition

that results in

patterns (15-18)

positive growth

Promotes healthy weight gain

Children with severe malnutrition who received soy-based formula had similar patterns of weight gain compared to those using a milkbased formula⁽¹⁹⁾

Supports overall heart health by lowering cholesterol in children, demonstrated through clinical research⁽²⁰⁻²²⁾
